Request for Proposals for IBSI Workshop Support

**Deadline for Applications for Workshops for FY16: September 18, 2015**

Date of Issue: August 12, 2015

IBSI has obtained funding for this academic year, some of which will be expended for short scientific workshops in the area of systems biology. Thus, applications are requested for funding or co-funding to organize such workshops. In addition to financial support, and upon request, IBSI may offer advice or assistance with the logistics of the workshops.

The scientific topics shall be in line with the mission of IBSI and focus on a combination of experimental and computational systems biology. Selection criteria include: Significance toward understanding select aspects of biological systems, pertinence to the mission of IBSI, and benefit to the members of IBSI and the Georgia Tech community.

The format of the workshop is up to the organizers. Previous IBSI workshops lasted for one or two days and included presentations of about 6 to 10 speakers, with about half of the speakers being external and half local. It is also the decision of the organizers whether to include poster sessions, panel discussions, or other events.

To apply, please submit as a PDF to the e-mail address below a proposal of up to two pages, containing a description of the focus of the workshop and its significance, a list of potential external and internal speakers, the envisioned time period for the workshop, and a tentative budget. Please note workshops must be held during this fiscal year.
